

PROJECT PLANNING DOCUMENT (PPD)

Reference Template for Document Validation System

1. Introduction

1.1 Purpose

Describe the purpose of this Project Planning Document. Mention the system name and explain what delivery roadmaps, scheduling timelines, resource allocations, and functional milestones this document is intended to define.

1.2 Scope

Describe the scope of the project plan. Explain which phases, work packages, deliverables, and development streams are included and what is excluded from the scope of this project.

1.3 Definitions, Acronyms, and Abbreviations

List important terms, acronyms, and abbreviations used in the document.

Term	Description
PPD	Project Planning Document
Milestone	A significant point or event in a project timeline
Gantt	A type of bar chart that illustrates a project schedule

1.4 References

List any documents, standards, or resources referred to when preparing this PPD, such as the initial Statement of Work (SOW), budget spreadsheets, or operational guidelines.

1.5 Document Overview

Briefly explain how the rest of the document is organized.

2. Functional Overview

2.1 System Functions

List the main phases and target delivery milestones of the project.

- Phase 1: Core User Management and Authentication Deployment
- Phase 2: Document Processing and File Stream Setup
- Phase 3: Validation Engine and Scoring Implementation
- Phase 4: Analytical Reporting UI Development
- Phase 5: Administrative Dashboard and Final Delivery

2.2 User Classes and Characteristics

Describe the different types of users who will use the system or follow this plan.

- Admin
- Registered User
- Guest User

2.3 Operating Environment

Describe the resource scheduling systems, collaboration spaces, development methodologies (e.g., Agile, Scrum), or roadmap tracking tools used to execute the plan.

3. Functional Requirements

3.1 Detailed Functional Requirements

Describe each milestone/deliverable task the team must fulfill, with a unique identifier and development priority.

Requirement ID	Description	Priority
PM-01	The project team shall deliver the registration module by Sprint 2.	High
PM-02	The project team shall finalize the database layer setup by Phase 1 end.	High
PM-03	The project team shall integrate file parsing engines prior to Phase 2 wrap.	High
PM-04	The project team shall complete scoring algorithm tests during Phase 3.	High
PM-05	The project team shall build data synchronization pipelines for reports.	High
PM-06	The project team shall launch user-acceptance test loops during Phase 4.	Medium
PM-07	The project team shall perform full admin dashboard handoffs during Phase 5.	Medium

4. External Interface Requirements

4.1 User Interface Requirements

Describe UI tracking requirements or status dashboards generated for project visualization.

- The roadmap software shall provide a simple progress visualization view (Gantt chart).
- The team updates shall display milestone completion scores clearly.
- The plan tracking view shall show alert markers if a task slips past its due timeline.

4.2 Software Interface Requirements

Describe project tracking utilities, APIs, project software integrations, or resource databases used by the management team.

- The plan may use a cloud roadmap API to synchronize project statuses across teams.
- The plan may use time-tracking data connections to balance resource distributions.
- The plan may pull automated status webhooks from version control pipelines.

5. Business Rules

5.1 Rules and Constraints

Define the business planning logic, gating rules, and entry/exit criteria that the project lifecycle must enforce.

- Phase iterations can only advance after previous dependencies achieve a "Done" sign-off.
- Scope adjustments must undergo formal change control protocols before implementation.
- Team task tracking values must match validated sprint estimations.
- The final evaluation metric determines project phase acceptance status.

6. Non-Functional Requirements

6.1 Performance Requirements

- The planning dashboard shall calculate and render timeline changes within an acceptable response time.
- The roadmap pipeline shall handle multiple simultaneous user edits without data loss.

6.2 Security Requirements

- Project financial tracking data shall be restricted to authorized roles.
- Planning document assets shall be securely backed up on enterprise drives.
- Shared developer credential keys shall be excluded from public planning views.

6.3 Usability Requirements

- The project plan view shall provide an explicit, user-friendly roadmap interface.
- Target milestone results shall be written clearly and be easy to evaluate.

7. Validation Rules

7.1 Required Sections

The uploaded Project Planning document should include the following main sections:

- Introduction
- Functional Overview
- Functional Requirements
- External Interface Requirements
- Business Rules
- Non-Functional Requirements

- Validation Rules
- Appendices

7.2 Validation Criteria

The document validation system should check:

- Whether required sections are available
- Whether section names are similar to the Project Plan template
- Whether sections follow the correct order
- Whether unrelated extra sections are included
- Whether the document belongs to the correct document type

7.3 Scoring Criteria

Score Range	Validation Result
75-100	Accept
50-74	Needs Improvement
0-49	Reject

8. Appendices

8.1 Appendix A: Functional Use Cases

Insert detailed work breakdown structure diagrams, critical path maps, or resource capacity charts if available.

8.2 Appendix B: Additional Information

Include any extra operational risk matrix definitions or contingency plans related to the project schedule.
