

RELEASE NOTES DOCUMENT

Reference Template for Document Validation System

1. Introduction

1.1 Purpose

Describe the purpose of this Release Notes Document. Mention the system name, version number, and explain what deployment behavior, modifications, and system updates this document is intended to define.

1.2 Scope

Describe the scope of the release notes. Explain which features, bug fixes, and patch environments are included and what is not covered by this document.

1.3 Definitions, Acronyms, and Abbreviations

List important terms, acronyms, and abbreviations used in the document.

Term	Description
RN	Release Notes
Hotfix	A quick deployment intended to address a critical issue
Rollback	Reverting back to a previous stable state

1.4 References

List any documents, standards, or resources referred to when preparing these Release Notes, such as the sprint backlog, version control logs, or deployment guidelines.

1.5 Document Overview

Briefly explain how the rest of the document is organized.

2. Functional Overview

2.1 System Functions

List the main functional updates of the release version.

- New user registration interface release
- Optimized document processing architecture
- Data validation logic improvements
- PDF report export fixes
- Upgraded admin control privileges

2.2 User Classes and Characteristics

Describe the different types of users impacted by this deployment release.

- Admin
- Registered User
- Guest User

2.3 Operating Environment

Describe the target hardware, software, browser compatibility configurations, or production environments required to run the released system build.

3. Functional Requirements

3.1 Detailed Functional Requirements

Describe each functional component item modified in the release, with a unique identifier and deployment priority.

Requirement ID	Description	Priority
REL-01	The system shall deploy the updated registration validation module.	High
REL-02	The system shall push the database schema migration patch for version 1.2.	High
REL-03	The system shall update the third-party document processing dependencies.	High
REL-04	The system shall introduce the new administrative UI components.	High
REL-05	The system shall execute automated smoke testing verification upon deploy.	High
REL-06	The system shall clear server caching files automatically post-release.	Medium
REL-07	The system shall display the updated version tracking tag on the UI footer.	Medium

4. External Interface Requirements

4.1 User Interface Requirements

Describe the user interface changes introduced by this release.

- The system shall show a deployment notification banner to users upon completion.
- The system shall present updated, clean layout styles across forms.
- The system shall display clear version labels inside system configurations.

4.2 Software Interface Requirements

Describe updated software components, APIs, databases, or external services affected by this release.

- The system update may consume modern web hook endpoints to notify external teams.
- The system migration may alter specific API database table tracking schemas.
- The system release may replace outdated package library versions.

5. Business Rules

5.1 Rules and Constraints

Define the business rules and release validation logic that the system deployment team must enforce.

- Only verified builds passing staging regression checks can be deployed to production.
- Major versions must always have an associated rollback package prepared.
- Build deployments must occur during predefined off-peak scheduling windows.
- The release status determines final pipeline stage approval.

6. Non-Functional Requirements

6.1 Performance Requirements

- The release deployment sequence shall complete within an acceptable pipeline duration window.
- The system build shall handle active user connections without downtime during blue-green deployment.

6.2 Security Requirements

- The deployment process shall allow only authorized DevOps engineers to trigger target pushes.
- Staging parameters and keys shall be stored securely in credential vaults.
- Compiled code artifacts shall be scanned for package vulnerabilities prior to release.

6.3 Usability Requirements

- The system release deployment logs shall provide an intuitive tracking layout.
- End-user release notifications shall be simple and easy to understand.

7. Validation Rules

7.1 Required Sections

The uploaded Release Notes document should include the following main sections:

- Introduction
- Functional Overview
- Functional Requirements
- External Interface Requirements
- Business Rules
- Non-Functional Requirements

- Validation Rules
- Appendices

7.2 Validation Criteria

The document validation system should check:

- Whether required sections are available
- Whether section names are similar to the Release Notes template
- Whether sections follow the correct order
- Whether unrelated extra sections are included
- Whether the document belongs to the correct document type

7.3 Scoring Criteria

Score Range	Validation Result
75-100	Accept
50-74	Needs Improvement
0-49	Reject

8. Appendices

8.1 Appendix A: Functional Use Cases

Insert detailed deployment step workflows, pipeline scripts, or environment routing diagrams if available.

8.2 Appendix B: Additional Information

Include any extra roll-back instructions or infrastructure notes related to the system release.
