

FEASIBILITY STUDY REPORT (FSR) TEMPLATE

Reference Template for Document Validation System

1. Introduction

1.1 Purpose

Define the exact purpose of this Feasibility Study Report (FSR). Declare the core project concept, initiative, or solution under engineering and economic evaluation.

1.2 Scope

Delineate the precise boundaries of this feasibility assessment, highlighting which organizational business domains, tech infrastructure stacks, and operational workflows are reviewed.

1.3 Definitions, Acronyms, and Abbreviations

Term	Description
FSR	Feasibility Study Report
TCO	Total Cost of Ownership
NPV	Net Present Value

1.4 References

Point explicitly to the initial System Proposal, high-level business briefs, market studies, or technological documentation referenced during this study.

1.5 Document Overview

Explain the structural layout and section ordering of this feasibility assessment report.

2. Feasibility Assessment Dimensions

2.1 Technical Feasibility

Evaluate whether the internal engineering team or current market tech stacks can reliably build the solution. Identify technical resource availability and core platform limitations.

2.2 Economic Feasibility

Review total financial viability. Detail the projected Total Cost of Ownership (TCO) against expected long-term financial yield, Net Present Value (NPV), and payback periods.

2.3 Operational Feasibility

Evaluate how seamlessly the software solution aligns with existing organizational culture, employee workflows, and long-term administrative practices.

2.4 Legal and Compliance Feasibility

Assess regulatory risks, including data compliance laws (e.g., GDPR, HIPAA), intellectual property rights, and industry-specific certifications.

3. Risk and Alternatives Matrix

3.1 Risk Profiling

Risk ID	Risk Description	Severity	Mitigation Action
RSK-01	Lack of specialized internal expertise for native cloud services.	High	Partner with certified external systems integrator.

3.2 Alternative Options

Provide a brief summary evaluation of alternatives considered, such as buying an off-the-shelf SaaS platform versus engineering a completely custom in-house software solution.

4. Final Recommendations

4.1 Evaluation Verdict

Provide an explicit, data-driven summary statement advising the executive stakeholders whether to Proceed, Pivot, or Cancel the proposed project initiative based on the findings.

5. Validation Rules

5.1 Required Sections

- Introduction
- Feasibility Assessment Dimensions
- Risk and Alternatives Matrix
- Final Recommendations
- Validation Rules
- Appendices

5.2 Validation Criteria

The validation engine must verify that all four core assessment pillars (Technical, Economic, Operational, and Legal) contain explicit, non-empty investigative sub-sections.

6. Appendices

6.1 Appendix A

Deep-dive financial cash-flow formulas, complete risk assessment rubrics, or recorded interview transcripts from target operational user groups.
